

## **SURGERY INFORMATION PACKET**

Dear Client,

Your pet has been scheduled for an upcoming surgery in the near future. In our attempt to assist clients, we have put together this package to make surgery day as easy and stress free as possible. In addition to this letter, you will find that the following information has been enclosed:

1. Pre-Anesthetic Blood Testing Information Form (**Bring in day of surgery**)
2. Surgical Information Sheet (**Bring in day of surgery**)

Please carefully go over all the enclosed information. If you have any questions, please feel free to call the hospital at (978) 632-7110. On your pet's surgery day, you will be required to review and sign an **Authorization/Estimate Form** which will allow you to choose optional services. We also will ask for a phone number(s) where you can be reached surgery day. **Failure to be reached on the day of the procedure may result in postponement of the surgery.**

The night before your pet's surgery, we ask that you **withhold all food and treats after 9:00pm**. Water may be left down after this time period. If you are currently administering any medications, vitamins and/or injections, withhold the morning doses unless otherwise instructed by the doctor.

The morning of surgery, the pet should be **dropped off between 8:00 – 9:00am** unless other arrangements have been made in advance. For example, new clients are required to have a pre-surgical visit the morning of the procedure and may not have an appointment until later. At the time of drop off, our team members will be happy to answer any remaining questions or concerns and then will collect the enclosed Authorization Form that you have completed.

A veterinary nurse will then escort your pet to the surgical prepping area to wait for their surgery. If you have elected to have any of the recommended blood tests performed, the nurse will collect the blood sample and have the tests done prior to the start of surgery at 10:00am. If any questions arise, the doctor may contact you at the number on the Authorization Form.

Surgeries are normally performed between 10:00am and 3:00pm. You are welcome to check up on your pet's status, however, we request that you call (Select option 5 from the menu) between 2:00pm and 3:00pm to allow plenty of time for your pet's procedure to be done. At this time, we will be able to give you an idea when your pet may be discharged. When you arrive to take your pet home, the receptionist will bill you out and the veterinary nurse will go over all discharge orders verbally and give you a written copy. If you do not understand any instructions, please do not hesitate to ask them to go over them one more time.

We hope surgery day will be a pleasant experience. Remember, the Gardner Animal Care Center team knows surgery can be an anxious time and we are always available to answer any and all questions concerning the upcoming procedure.

We look forward to serving you and your pet on the upcoming surgery day and years to come.

## PRE-ANESTHETIC BLOOD TESTING INFORMATION FORM

PLEASE READ CAREFULLY.

At Gardner Animal Care Center, our greatest concern is the well being of your pet. Your pet is scheduled for anesthetic procedure soon. Before putting your pet under anesthesia, we routinely perform a full physical examination. We also highly recommend and sometimes require, that a **pre-anesthetic blood profile** be performed on all pets' undergoing anesthesia to maximize patient safety. The surgeon may be alerted to the presence of dehydration, anemia, infection, diabetes and/or kidney or liver disease that could complicate the procedure. These conditions may not be detected without a pre-anesthetic profile thus not allowing for the most appropriate and safest anesthetic regime to be administered. These tests are similar to those your own physician would run if you were to undergo anesthesia. In addition, these tests may be useful if your pet's health changes to develop faster, more accurate diagnoses and treatments.

*State of the art equipment enables us to perform the pre-anesthetic blood profile at our hospital and we are committed to making this technology available to our patients.*

The **Authorization Form** you will sign on your pet's surgery date will offer pre-anesthetic blood work.

1. **The Quantitative Blood Count (QBC) and Pre-Anesthetic Profile** which includes:  
**CBC:** PCV (anemia), White Blood Cell Count (infection) and Red Blood Cell Count (anemia/bleeding disorder), Platelet Count (clotting disorder)  
**Profile:** BUN and Creatinine (kidney), ALKP and ALT (liver), Glucose (sugar), Total Protein (dehydration), and electrolytes (imbalance).
2. The owner elects to decline the recommended pre-anesthetic blood tests at this time but requests that we proceed with the procedure. This is indicated by *not* checking the optional procedures.

You will notice other tests available that are not included in the above choices. We have selected tests that give the doctors a suitable overview of healthy patients. However, if the patients are in their senior years (above 7 years old) or are sick, the *full* senior profile can be done the day of the procedure at the owner's request. It has been included in the high amount estimate.

On the **Feline Patient Authorization Form**, our feline owners will see a **FeLV/FIV Test** option. We highly recommend this test be performed on all feline patients at least once in their lives because Feline Leukemia and Feline Immunodeficiency Virus (Feline Aids) are viruses for which no cure exists. If your pet goes outside, we recommend administering the Feline Leukemia vaccine as well. Please ask questions if you would like to learn more about Feline Leukemia and Feline Aids.

We realize surgery and anesthesia are scary for both the owner and patient and we attempt to make surgery day as safe and comfortable for all involved. The physical examination and blood work done prior to any surgical procedure allow us to best minimize anesthetic and surgical risks and maximize patient safety. If you have any questions or hesitations about the scheduled procedure, please do not hesitate to call (978) 632-7110 and discuss any aspect of the upcoming procedure.

## **Surgical Information Sheet**

PLEASE READ CAREFULLY.

### **Anesthetic Procedures and Risks**

At the Gardner Animal Care Center, we use a combination of pre-anesthetic medications and injectable and/or inhalant anesthetics to achieve optimum levels of anesthesia that are safe for your pet.

For short procedures, an injectable anesthetic is given alone that produces a good plane of surgical anesthesia with a quick recovery.

For most procedures, your pet is anesthetized and then intubated (insertion of a tube into the trachea or wind pipe). This will ensure that your pet is able to receive oxygen at all times and prevents aspiration of any fluids into the lungs. For procedures that require minimum sedation, an injectable anesthetic is given that produces a good plane of sedation with quick recovery.

Anesthesia is maintained with a gas anesthetic, *Sevoflurane*, which is very safe and is not metabolized by the body. This allows us to have more control over anesthetic depth and it is less irritating to the airways. Another advantage to Sevoflurane is a quick induction using a mask verses using injectable anesthetics that require metabolism from the body.

### **Monitoring and Pain Management**

Monitoring of patients during anesthesia is done in two ways. First, a veterinary nurse is with your pet continuously from beginning of anesthesia to recovery. Second, we have a computerized monitor that records heart rate, pulse rate, oxygen levels, respiration, ECG, core and rectal temperature.

Our clinic strongly believes in compassionate, quality, medical care for our patients. As a result, all surgery patients will receive pain management before, during and after surgery. Additionally, pain medication may be prescribed to go home.

Additional information will be given to you at discharge. We hope this program will reduce any discomfort experienced by your pet and aid in a quicker recovery.

### **Intravenous Catheterization and Fluids**

We highly recommend the placement of an IV catheter and use of IV fluids during all anesthetic procedures. This allows us to have quick, available access to the circulatory system (blood) in case of an unforeseen emergency. The fluids help provide support to the circulatory system, prevents dehydration and aids in a quicker recovery from anesthesia.

### **Potential Surgical Complications**

1. **Canine and Feline Spay**
  1. Bleeding
  2. Infection
  3. Recurrent Heat
  4. Urinary Incontinence
  5. Weight Gain
  6. Suture Reactions
2. **Canine and Feline Alter**
  1. Bleeding
  2. Infection
  3. Testicular Swelling
  4. Suture Reaction (Canine Only)
3. **Feline Declaw**
  1. Bleeding
  2. Infection
  3. Limping/Lameness
  4. Regrowth of Nail
4. **Tumor/Lump Removal**
  1. Bleeding
  2. Infection
  3. Swelling and Drainage
  4. Suture Reaction

**It is important for you to understand that there is always a risk of anesthetic and surgical complications anytime these procedures are performed. At the Gardner Animal Care Center, we strive to take the highest quality care of your pet and take all the added precautions you allow to avoid potential problems. Thank you for entrusting your pet to us.**
